

Broadband over Power Lines is a "For the Money" bad idea. BPL would raise the RF interference level in the HF spectrum to intolerable levels. Look at the information provided by the ARRL, this just won't work. The Power Companies can,t even run the electric system and grid operations. Look at 8/14/03! They don't need any more problems and we don't need any more RF interference in the HF spectrum. Please don't hook a bunch of RF generating computers to an endless antenna called a power line!
